Education

Gandhi Institute of Technology and Management

August 2022 – May 2026

Bachelor of Technology in Computer Science

Hyderabad, Telangana

Experience

Developers Breach

January 2025 – July 2025

Kotlin Developer Intern

Remote

- Designed and implemented AI-powered in-app content generation features using Gemini API in a Kotlin Multiplatform application, enabling dynamic learning content delivery and improving user engagement.
- Built reusable cross-platform components using Kotlin Multiplatform with Koin-based dependency injection, pagination, and structured state management, improving modularity and performance of the application.
- Authored 2 technical articles, including *Ktlint–The Ultimate Guide to Kotlin Code Formatting* and *Compose Screenshot Testing with CI/CD integration*.

Rise Institute

January 2026 – Present

Freelancer

Remote

- Developed features for a production-grade Learning Management System (LMS) by integrating distributed backend services via REST APIs, including authentication (Google Sign-In, 2FA) and role-based dashboards.
- Implemented scalable client-side modules for course management, attendance tracking, real-time chat, live session scheduling, and notifications, ensuring seamless data synchronization with backend systems.
- Contributed to deployment on Google Play Store for the *BARTI* app, developed under the Dr. Babasaheb Ambedkar Research and Training Institute (Government of Maharashtra) for Scheduled Caste welfare and empowerment.

Adgama Digital Pvt Ltd

February 2026 – Present

Android Intern

Remote

- Developed and delivered production-ready Android applications for multiple clients on a weekly release cycle, implementing features using REST APIs and Firebase/Supabase backend services.
- Engineered scalable mobile architectures using MVVM and modular design, incorporating offline-first data handling, state management and local caching to improve fault tolerance across network conditions.

Projects

Thrift It | *Kotlin, Jetpack Compose, Firebase, Cloudinary*

December 2025

- Designed and developed a scalable offline-first marketplace application using MVVM architecture, implementing local caching with Room and background synchronization with Firebase to ensure data consistency.
- Implemented client-server interactions using Firebase services, including OTP-based authentication, real-time data synchronization, and asynchronous media uploads, ensuring consistent state management and smooth user experience.

RhythmAI | *Kotlin, Jetpack Compose, TensorFlow Lite, Python*

January 2026

- Designed a real-time ECG monitoring system processing signals at 360Hz using a sliding window pipeline, enabling on-device arrhythmia detection with a three-stage inference architecture (SQI → screening → diagnosis).
- Optimized edge AI inference using TensorFlow Lite quantization and multi-stage classification, achieving sub-20ms latency with 700Kb model size while reducing unnecessary computations through quality-gated execution.

Technical Skills

CS Fundamentals: Data Structures & Algorithms (problem solving), Object-Oriented Design, Complexity Analysis

Languages: Java, Kotlin, Python, SQL

Android: Jetpack Compose, MVVM, Clean Architecture, Coroutines, Flow, Navigation, Room, Hilt

Backend & Tools: REST APIs, Firebase (Auth, Firestore), Supabase (Storage), Client-Server Architecture, Git, GitHub

Leadership & Achievements

Google Developer Group On-Campus, Campus Lead (2024–2025): Led a team of 20+ developers, organized technical events, and drove community learning initiatives.

Smart India Hackathon: Secured 2nd place in 2023 and 1st place in 2024 internal hackathons, demonstrating strong problem-solving, consistency, and collaborative development skills.
